

# SKYWATCHERS STORMPULSE

*An Informative website*

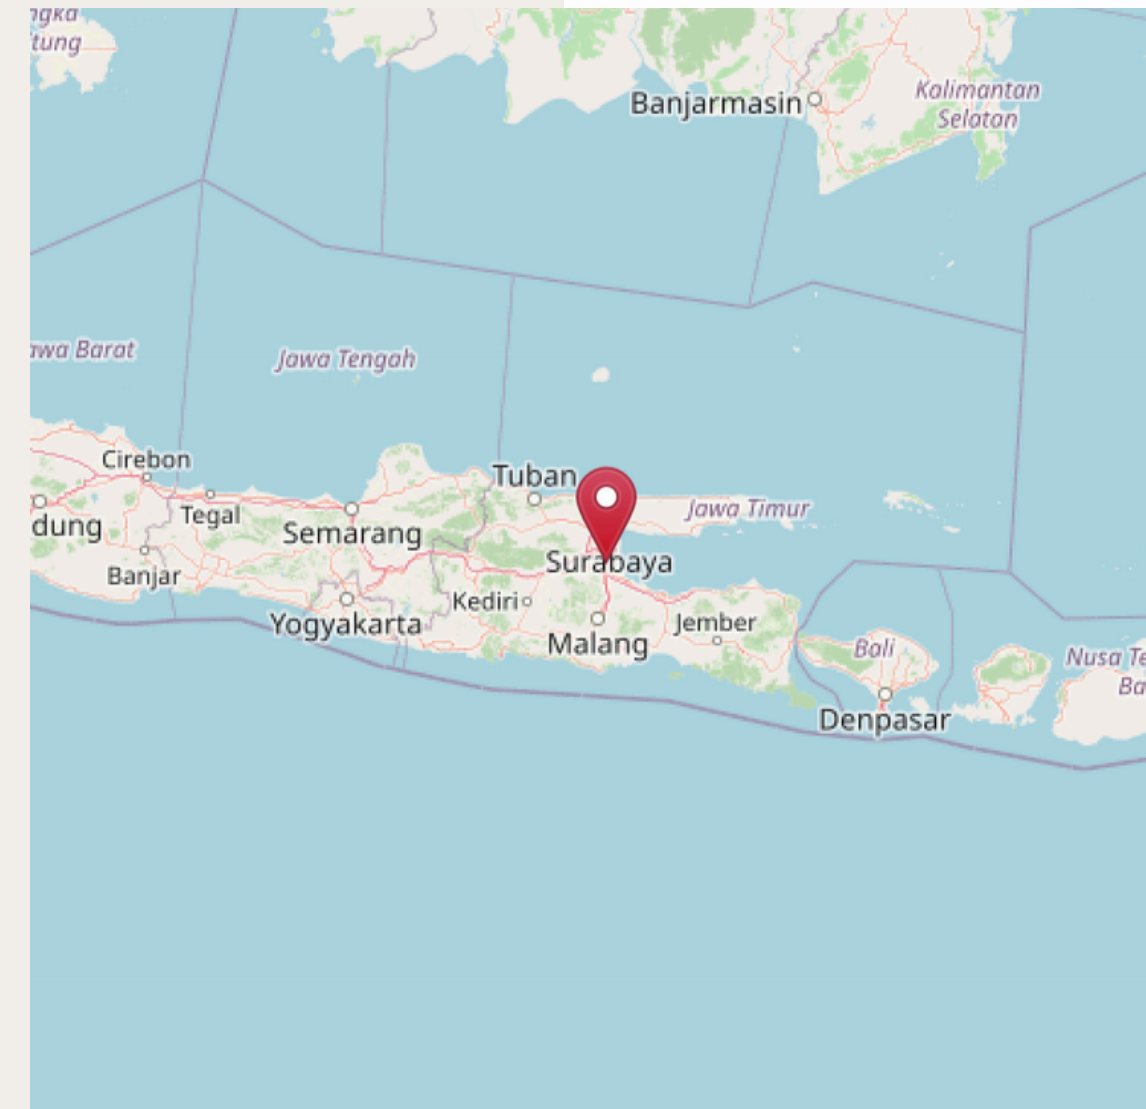

## ABOUT THE WEBSITE

SkyWatchers StormPulse is a platform where users can get more focused information about the storms happened in the world and the links related to that particular storm. It is completely an informative platform and it's only about the storm users need and not more than that. This can be useful for government agencies, academic institutions, students, researchers, etc.

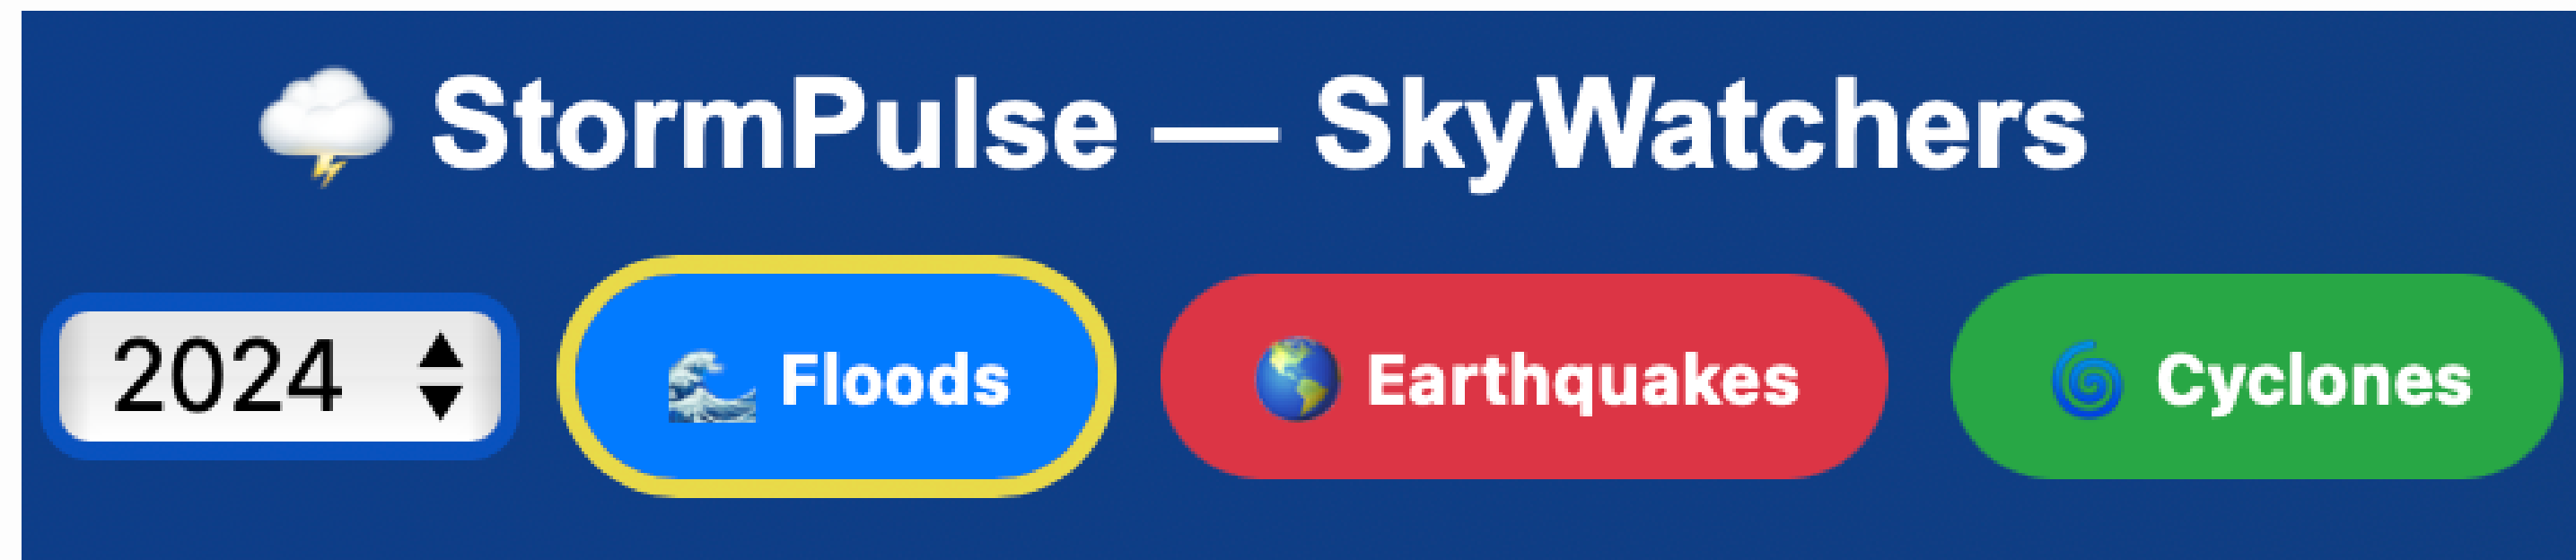

# WORKING OF THE WEBSITE

We need to first select the year and the type of storm we need to know more about. The maps will show us that particular storms taken place at that year all over the world. If we click the location pin of the storm which we need to know about, an overlay opens with three tabs, the first tab is the information about it, the next tab is the related links about the storm and the last one is the articles about that particular storm.

# STORMS

The data is very minimal and focusing only on the creativity and showing only the working. I have included only these in the website.

**Floods**

2022-2024

**Earthquakes**

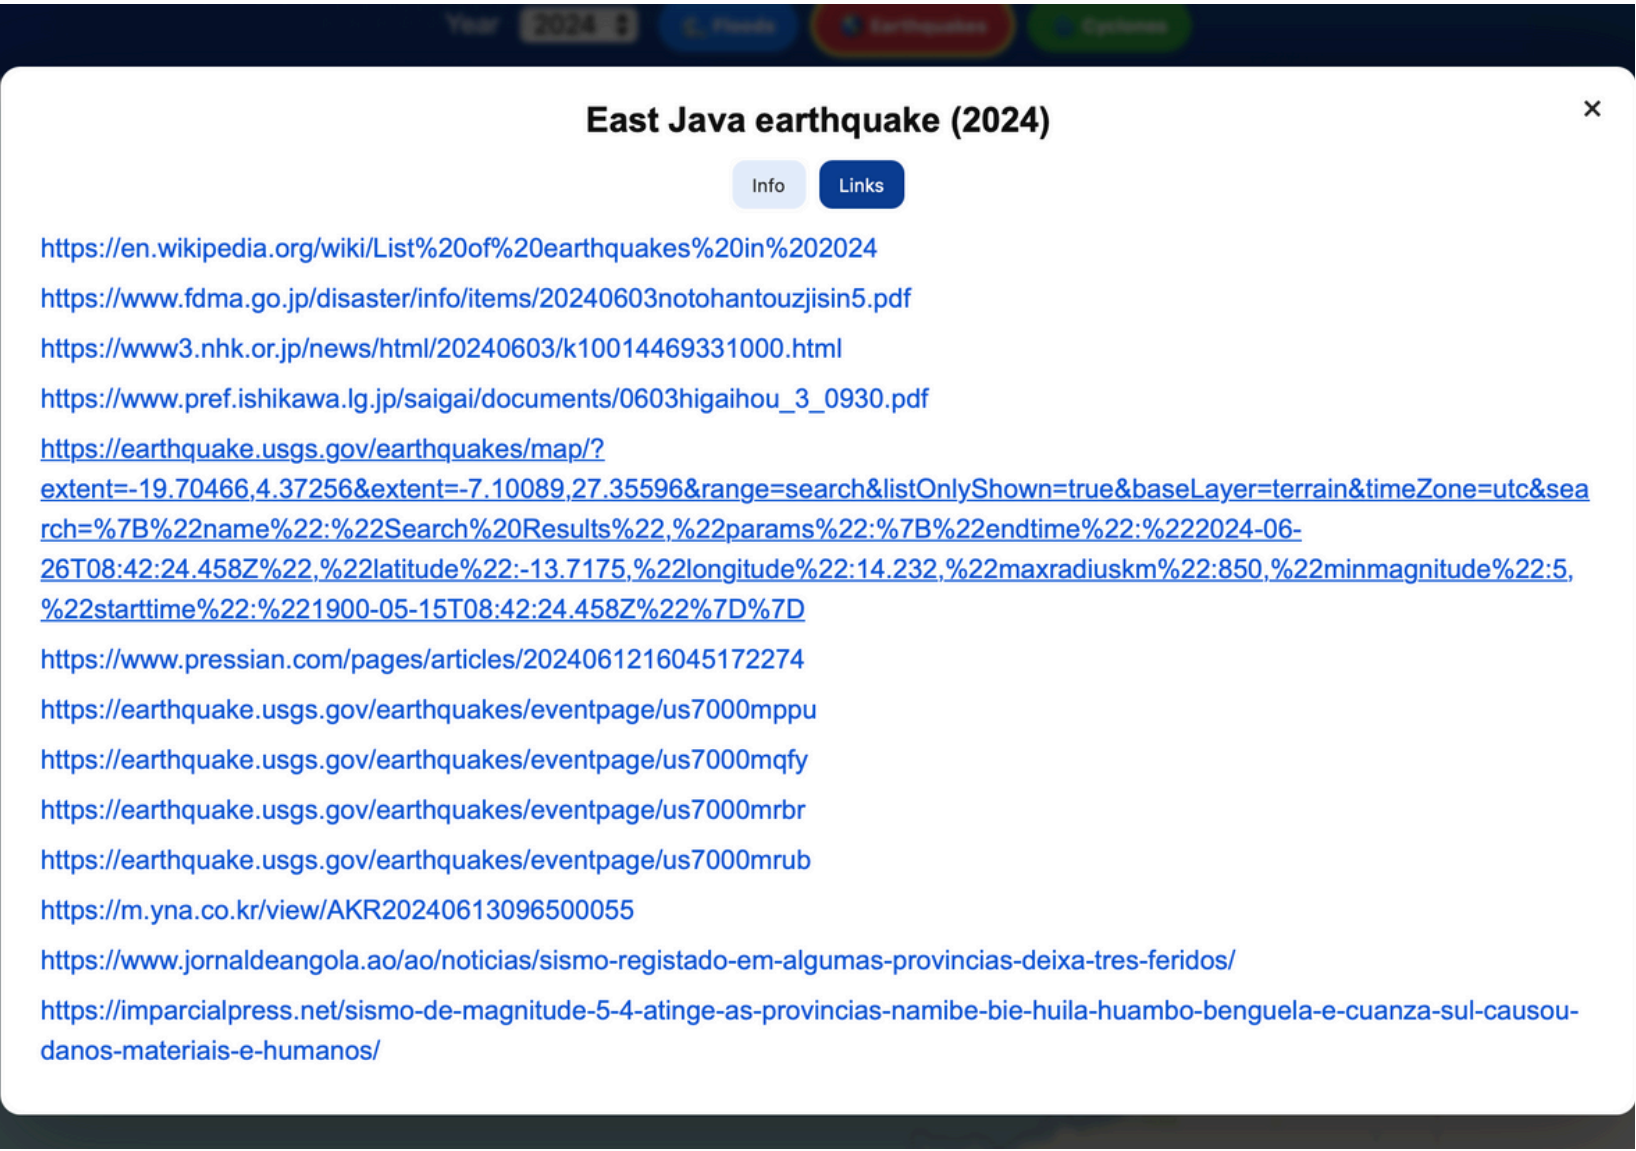

2022-2024

**Cyclones**

2022-2024

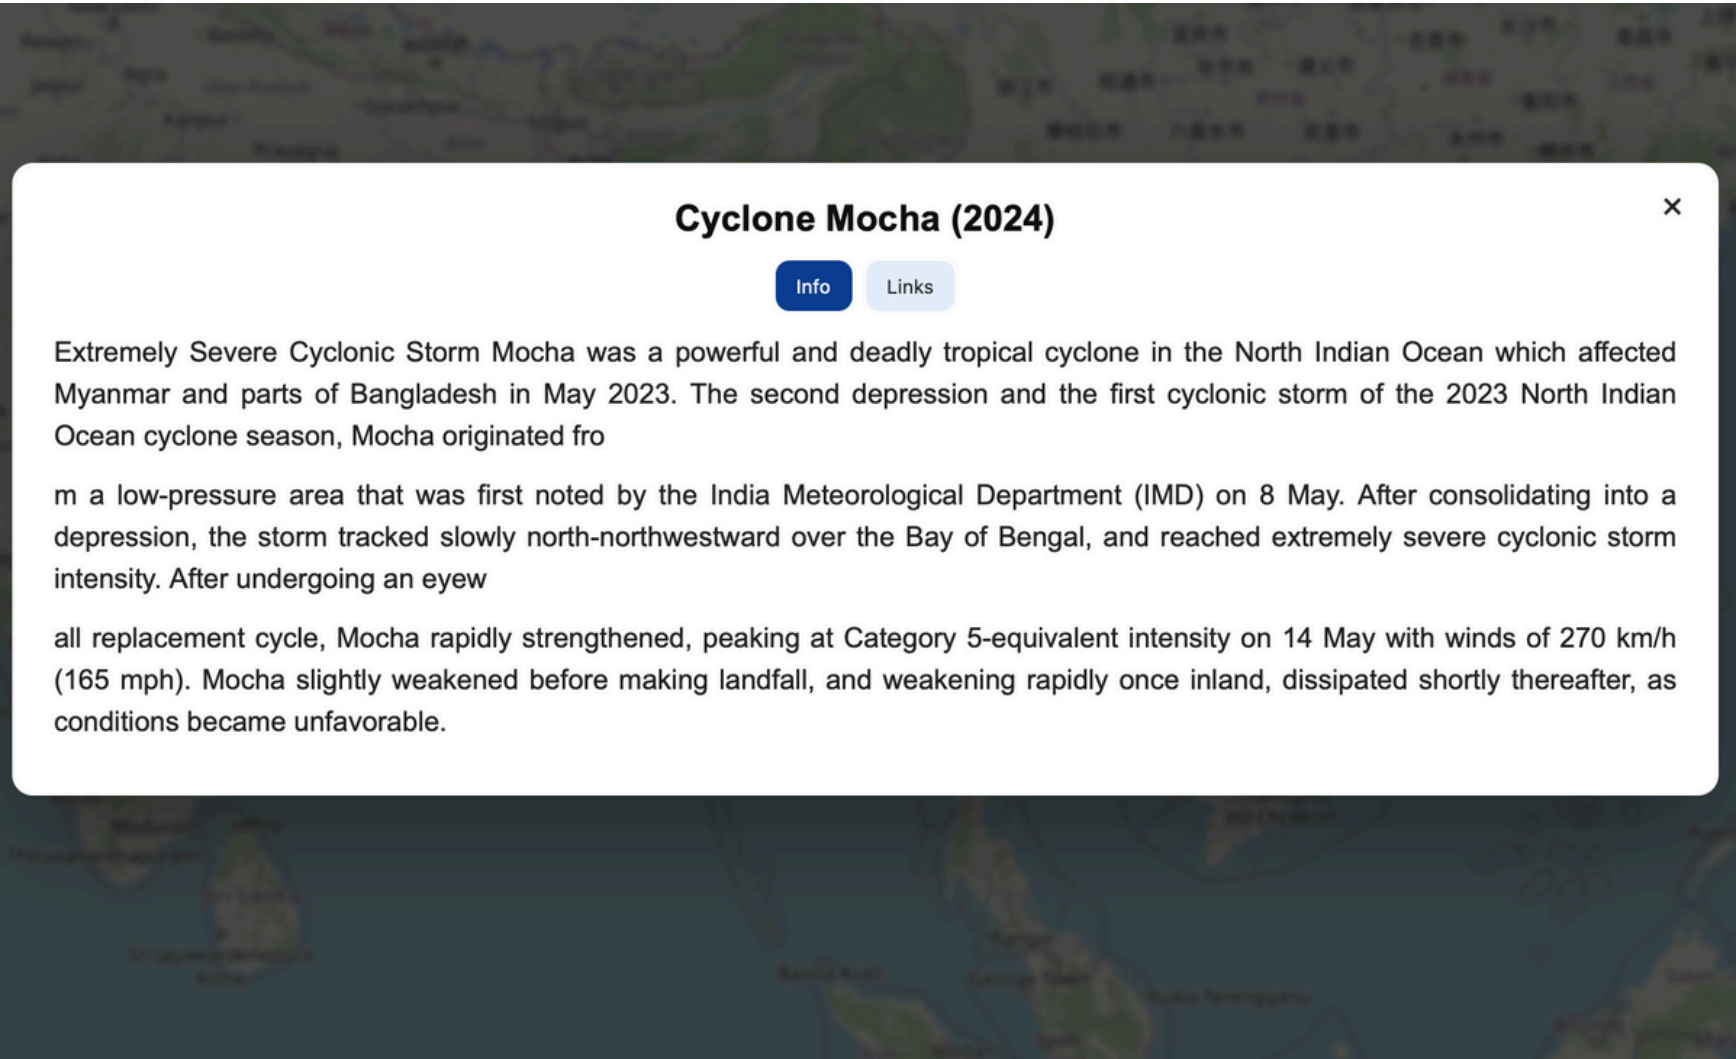

# DETAILS

There are three tabs which shows up when we click the location pin.

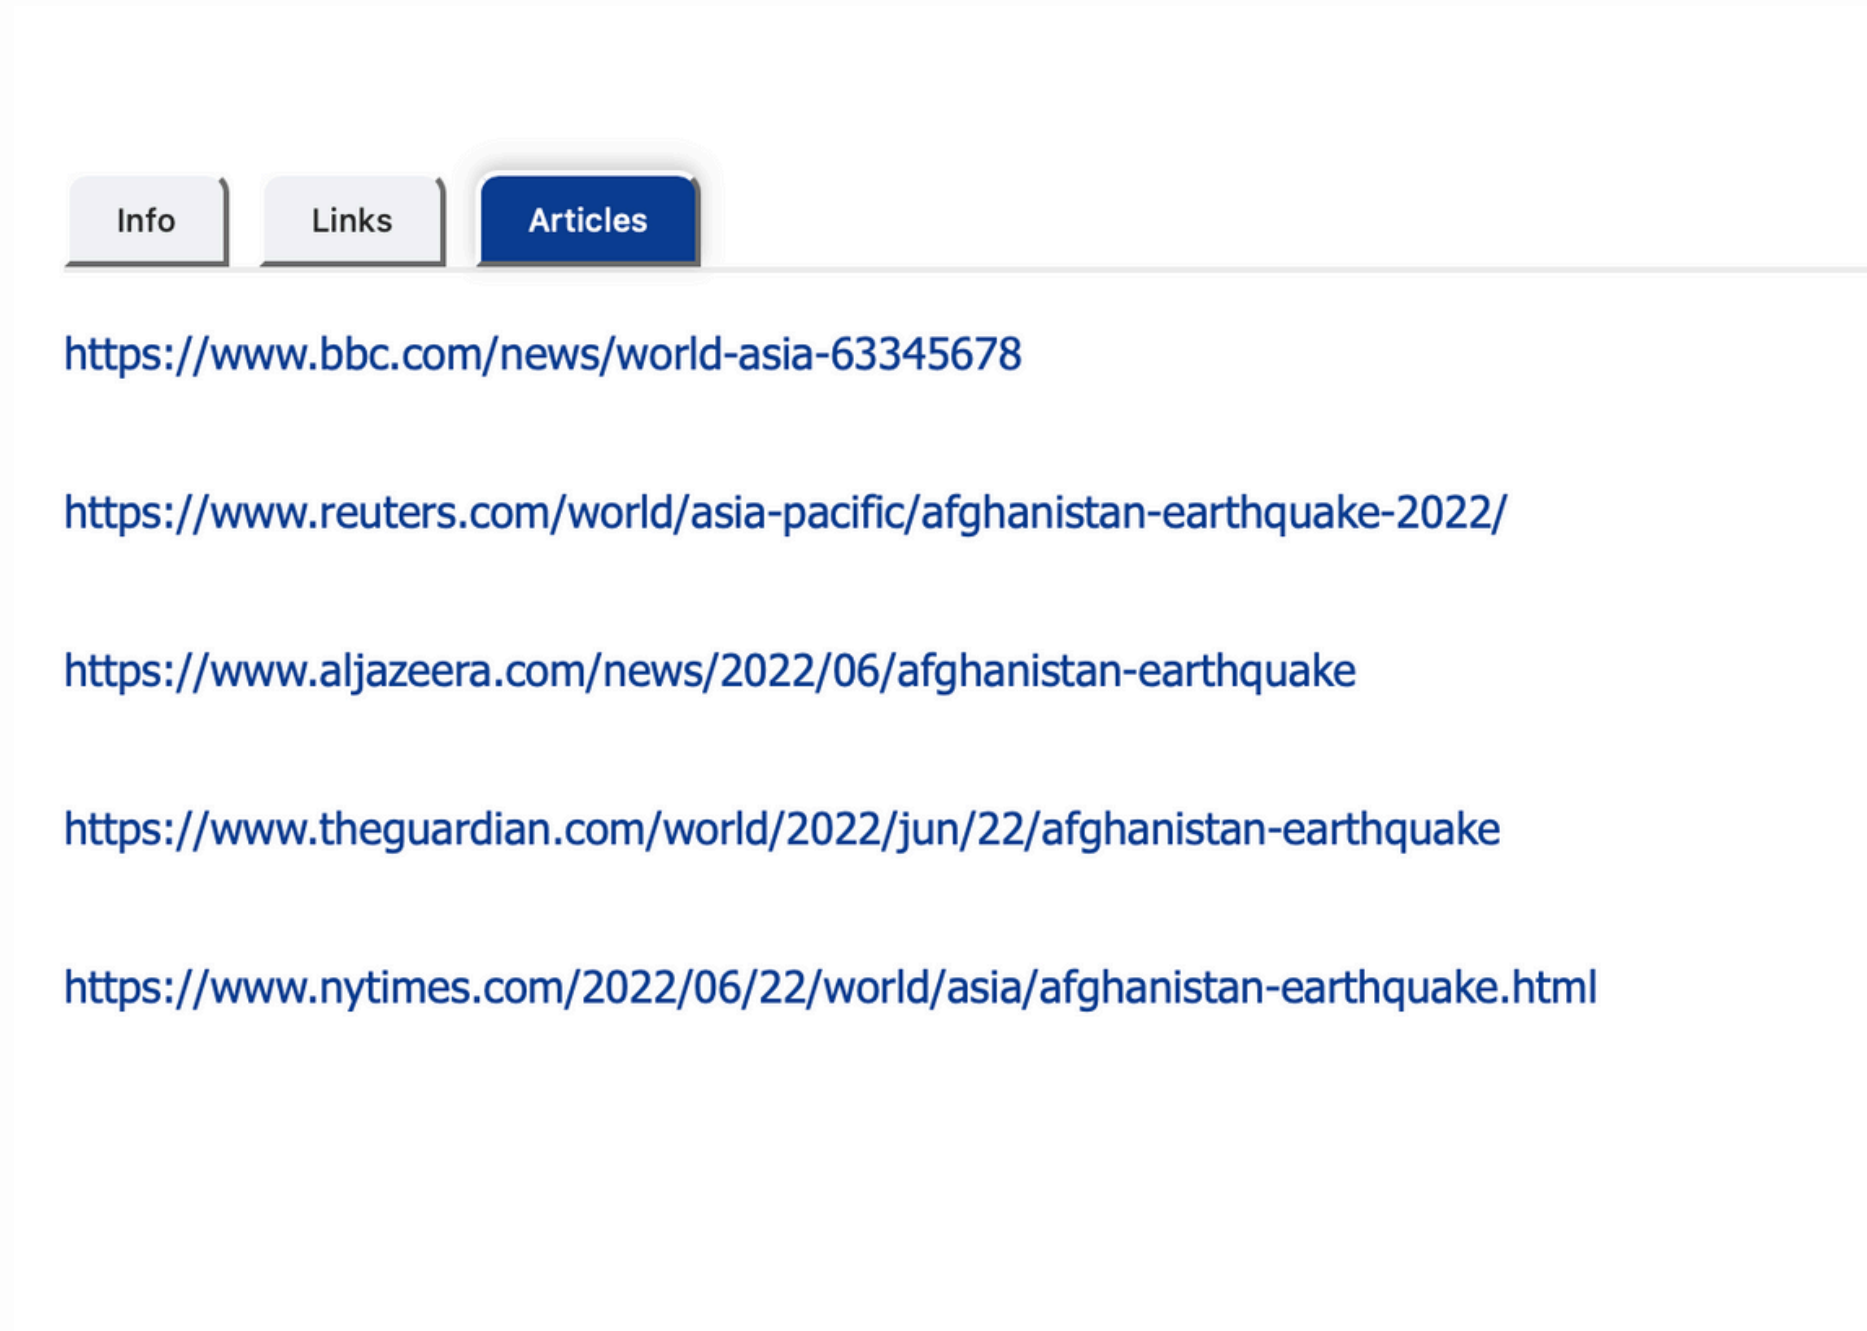

Second tab is link tab, which shows the related links about that particular storm. ( as shown in the picture above)

First tab is the info tab, which gives us small description about the storm. ( as shown the picture below)

# DETAILS

The third tab is article tab, which contains articles published about that particular storm.
